It is very important in terms of Council's risk management to ensure that any one providing reports and certification of matters relating to geo-technical investigation and recommendations is accredited. As a reminder, accreditation at this time comprises formal advice **from a provider's insurer** that current Professional Indemnity insurance cover is held and its quantum.

The "Opinion" **has** to be in the format provided. The "Site Report" is preferred in the format provided, however, some practitioners want their own form of presentation. Officers may find it helpful to be aware of the preferred Site Report format as the elements of that should be able to be identified in the documentation as presented.
