# SESSIONS & RESOURCES FOR SCHOOLS

---

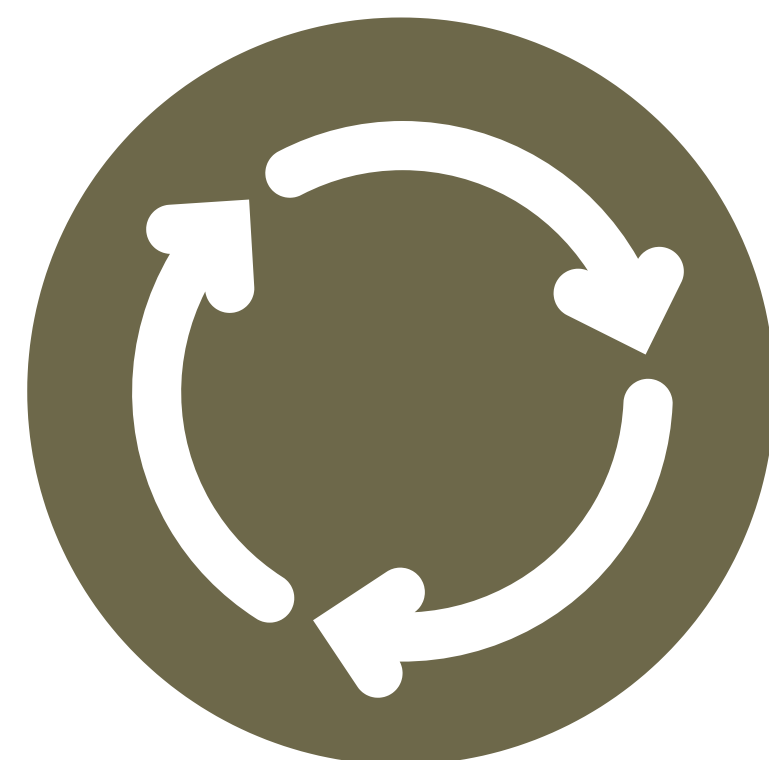

## WHENUA | SOIL

Explore the world beneath your feet. Investigate why soil is the key to a healthy environment in this hands-on session.

## LEAF LITTER SEARCH

Investigate & document the natural stages of decomposition in a bushy area near you!

## NATURAL CYCLES

We use natural cycles such as plant or insect life cycles to consider what lessons we might be able to apply to our food waste systems.

## WORLD OF WORMS

We introduce the amazing world of worms to your students through an informative talk, then students set up a small worm farm to see how worms can help with our waste.

## EM BOKASHI BASICS

Find out what EM Bokashi is and how it could work at your school. We will get you set up to give it a try in your classroom.

## COMPOST POWER

Is your school compost system working as well as it could? Learn about compost, and have a go at building a compost pile. Your school caretaker is invited too!

---

## CONTACT

Sessions can be tailored to meet your needs. Please contact me to discuss your requirements and make a booking.
