Dear Commissioners

Proposed Marlborough Environment Plan – Topic 21: Definitions

Thank you for the opportunity to present evidence and have a conversation about the GPS units and Lightning rods at the hearing on Tuesday 6th November. I was requested to confirm the dimensions of GPS units and Lightning rods if there was a rule in the proposed Plan to control the size of this type of equipment. We have considered the request and believe that various dimensions that I presented in evidence can be combined and summarized as follows:

Activity	Zones
GPS units <ul style="list-style-type: none">• 300mm high and 130mm in diameter	Permitted in all zones
Lightning rods <ul style="list-style-type: none">• Up to 650mm high and 60mm in diameter – residential zones• Up to 1500mm high and 60mm in diameter – business, industrial and rural zones	Permitted in all zones

I am happy to respond to any further queries. Again, thank you for the opportunity to provide our thoughts on appreciate dimensions.

Yours sincerely,

A handwritten signature in black ink, appearing to read "Graeme McCarrison".
