I / We declare that the following,

1) Glazed windows & doors, or

2) Opaque doors, or

3) Skylights.

supplied by us to this Project / Site, achieve a **Construction R-value** as stated below,

**Construction R-value = R**  m<sup>2</sup>.K/W

*(Note – The Construction R-value shall be no less than the value specified within the Consent listed above.)*

This R-value has been determined using one of the following methods,

i) Selected from Table E.1.1.1, or

ii) Derived using a WEERS calculator, or

iii) Calculated in accordance with H1/ . *(Confirm H1/AS2, VM1, or VM2)*

*(Supporting documentation for methods will be supplied on request.)*

	0.60	Thermally improved	Glass: Low $E_4$ /Low $E_4$ / Clear Gas: Argon		R0.62	R0.91	R1.01

**Notes:**

- (1) Thermal transmittance of the glazing determined using BS EN 673. Where the  $U_g$ -value of the proposed glazing is different from the values included in the table,  $R_{\text{Window}}$  shall be determined based on the nearest  $U_g$ -value in the table that is greater than the  $U_g$ -value of the proposed glazing.
- (2) 'Thermally improved' refers to a spacer that meets the definition of thermally improved spacer in ISO 10077-1 Annex G.
- (3) The examples provided are informative descriptions only of the *insulated glazing unit (IGU)* types that might be used to deliver the nominated  $U_g$ -values. When using this table,  $R_{\text{Window}}$  shall be determined based on  $U_g$ , spacer type and frame type.
- (4) The properties of each of the glass panes within the *IGU* are provided and separated by '/'. 'Clear' refers to clear float glass. 'Low  $E_1$ ', 'Low  $E_2$ ', 'Low  $E_3$ ' and 'Low  $E_4$ ' refer to glass with low emissivity coatings at different performance levels.
